

OXY LOW CARBON VENTURES FAST FACTS

CARBON MANAGEMENT

Oxy's Low Carbon Ventures (LCV) is dedicated to advancing leading-edge, lower-carbon technologies and decarbonization solutions, including Direct Air Capture (DAC), lithium development and near emissions-free power, that complement and enhance Oxy's core oil and gas businesses while reducing emissions.

LCV capitalizes on Oxy's extensive experience using and transporting carbon dioxide (CO₂) through its development of carbon capture, utilization and storage (CCUS) projects and as a key input for enhanced oil recovery.

OUR STRATEGY

LCV is developing and commercializing new projects, products and technologies to:

- Lead and support the development of innovative carbon management technologies, including large-scale DAC and other solutions to enable a lower-carbon future.
- Partner with industrial operators to economically capture, transport and securely store CO₂ in subsurface formations.
- Grow Oxy's business in line with core competencies, leveraging decades of technical expertise and carbon transportation experience.
- Economically reduce Oxy's carbon footprint from its operations by utilizing low or zero-emission power sources.

LCV Businesses

1PointFive

Carbon removal and storage company formed in 2020 that provides innovative climate solutions like DAC and geologic CO₂ sequestration.

Carbon Engineering

DAC technology company working to make capturing large amounts of CO₂ from the atmosphere a cost-efficient reality. Oxy acquired Carbon Engineering in 2023 to rapidly advance DAC technology breakthroughs, building a robust and diverse development portfolio to accelerate deployment and drive down the cost of capture.

TerraLithium

Lithium development company that aims to deploy its proprietary Direct Lithium Extraction and associated technologies to extract and commercially produce high-purity lithium compounds from brines. TerraLithium, a wholly owned Oxy subsidiary, formed a joint venture in 2024 with BHE Renewables to develop and deploy the technologies.

LCV Investments

NET Power

Developer of power generation projects to meet the rapidly growing demand for reliable, scalable power. NET Power's near-term focus is on delivering natural gas power generation, with projects designed to accommodate carbon capture in later phases.

Carbon Finance Labs

Innovation incubator that leverages new information technology, regulations and marketplaces to define transparent processes for carbon tracking.

Carbon Upcycling

Waste and carbon utilization company utilizing advanced materials science to optimize carbon capture, transforming CO₂ into a valuable resource for heavy industry while reducing global carbon emissions.

Cemvita

Forward-thinking biotech firm that has developed a CO₂ utilization platform that mimics photosynthesis using CO₂ as feedstock to produce industrial chemicals and sustainable aviation fuel.

LanzaTech

CCUS company with technology to turn CO₂ into valuable products, like ethylene and sustainable aviation fuel.

Newlight

Decarbonization technology company that uses natural microorganisms to convert greenhouse gases into biodegradable plastic.

Pure Lithium

Vertically integrated, next-generation lithium metal battery technology company working on high-energy-density storage. Pure Lithium is downstream of Oxy's TerraLithium business.

SensorUp

Enterprise software developer of a data integration platform for methane leak detection and repair, measurement reconciliation, reporting and verification of methane emissions.

Xpansiv

The world's largest integrated, open and neutral market infrastructure for the global energy transition. Xpansiv's technology platform covers the entire lifecycle of environmental commodities, and connects diverse markets and participants playing a pivotal role in scaling the energy transition.
