

ROCKIES FAST FACTS

A LEADING PRODUCER IN THE DJ BASIN

Oxy is one of the largest oil and gas producers in the United States, including a leading producer in the DJ Basin in Colorado. Through its subsidiaries, Oxy has operated in the DJ Basin for more than 30 years. Our employees live in more than 70 communities along Colorado's Front Range, and we recognize the importance of working collaboratively with landowners, community members, regulatory agencies and government officials.

According to the state emissions inventory reports, Oxy has the lowest greenhouse gas (GHG) intensity of any major operator in Colorado due to industry-leading best management practices, which include:

TANKLESS OPERATIONS

Oxy's innovative surface design in the DJ Basin uses pipelines instead of trucks to transport oil to a central processing facility, eliminating the need for storage tanks near wells. This intentional design of our production facilities decreases our environmental footprint and reduces emissions, dust, noise and truck traffic.

CONSERVING WATER AND REDUCING IMPACTS

Our Water On Demand system delivers water for hydraulic fracturing to well sites in the DJ Basin through a pipeline network, reducing truck traffic and associated impacts to roads, noise and emissions. In many cases, this water is recycled, and Oxy continues to develop advanced treatment processes that enable additional recycling and reuse of its own process water. Since implementation, the Water On Demand system has eliminated more than 3.5 million truck trips and avoided nearly 75 million travel miles.

REAL-TIME MONITORING

Our 24-hour Integrated Operations Center provides real-time monitoring and remote operation capabilities for many of our DJ Basin wells, water tanks and gathering systems.

Powder River Basin Leadership

Oxy's history in the Powder River Basin dates back two decades. Oxy was the first to discover the Turner formation of the Southern Powder River Basin, where we now hold a 155,000 net mineral acre position with stacked-oil potential in the area.

Reducing GHG Emissions

Oxy climate-related strategy focuses on reducing greenhouse gas (GHG) emissions in our operations, while developing innovative technologies that enable differentiated oil and gas, power and products with lower-carbon intensity.

Oxy was the first U.S. oil and gas company to establish net-zero goals for direct and indirect GHG emissions and to endorse the World Bank's Zero Routine Flaring (ZRF) by 2030 Initiative. Since 2023, Oxy has sustained ZRF across our U.S. oil and gas operations and we expect to achieve ZRF across our international operated assets well ahead of the World Bank's 2030 target.

Technology and Data Analytics

Industry-leading engineering and the applied use of technology and data analytics are improving efficiency, reducing costs and driving performance, positioning Oxy for long-term success. Our proprietary Oxy Drilling Dynamics technology is helping drive down costs by reducing drilling days, preventing tool failures and improving precision landing.

This brochure contains forward-looking statements based on Oxy's current expectations, beliefs, plans and forecasts. All statements other than statements of historical fact are forward-looking statements. These statements are not guarantees of future performance as they involve assumptions that may prove to be incorrect and involve risks and uncertainties. Factors that may affect Oxy's business can be found in Oxy's filings with the U.S. Securities and Exchange Commission (SEC), which may be accessed at the SEC's website, www.sec.gov.

September 2026

Strong Safety Performance

Safety is an integral part of Oxy's company culture, and we take pride in our track record. In 2025, Oxy achieved its best employee safety performance ever for its total recordable injury rate.

Artificial Intelligence

Artificial Intelligence (AI) is embedded across Oxy, enhancing and supporting drilling, production, subsurface evaluation, and key corporate functions. By applying AI to both near-term operational optimization and longer-term technical challenges, we're improving safety, efficiency and performance while advancing how resources are developed over time.

Low-Carbon Leadership

With decades of experience in large-scale CO₂ transportation, use and storage for enhanced oil recovery (EOR), we are applying our carbon management expertise to advance low-carbon initiatives that we believe will sustainably enhance our business. Oxy is focused on decreasing our total carbon footprint and helping others achieve the same goal.

Strong Position and Portfolio

Oxy's ~16.5 billion barrels of oil equivalent global resource position is built on a balanced portfolio that combines leading unconventional assets with world-class EOR and advanced recovery capabilities complemented by resilient Gulf of America and international operations. Together, with integrated technologies in CO₂, power and water, Oxy is positioned for delivering differentiated long-term value.

Low Carbon Ventures

Leveraging our carbon management expertise, our Low Carbon Ventures (LCV) subsidiary leverages our legacy of carbon management expertise to develop carbon capture, utilization and storage (CCUS) projects, including the commercialization of Direct Air Capture (DAC) technology, and invests in other technologies intended to reduce greenhouse gas emissions from our operations and help others do the same. LCV also fosters emerging technologies with the potential to position Oxy as a leader in the production of low-carbon energy and products, including near zero-emissions power and lithium.

In the Community

We value our reputation and conduct business in a manner that safeguards our employees and contractors, benefits neighboring communities, strengthens regional economies and provides energy that is essential to society, while working to minimize our environmental footprint. In the Rockies, we partner with Food Bank of the Rockies and Weld Food Bank. We also support Girls Inc. of Metro Denver and the Denver Museum of Nature and Science.

Community Dialogue

Oxy employees who participate in the Advocate and Ambassadors program meet with stakeholders about our industry and operations. These conversations provide opportunities to listen to feedback from communities, and provide information about our operations and how we support Colorado.

STEAM Educational Partnerships

Oxy partners with nonprofit organizations—including the Denver Museum of Nature & Science, Girls Inc. of Metro Denver, Boys & Girls Clubs of Weld County, Colorado Future Farmers of America (FFA) and Boys & Girls Clubs of Central Wyoming—to ensure students across the Rockies have access to educational opportunities in science, technology, engineering, arts and math (STEAM). Oxy also actively supports students enrolled in Mead High School's Energy Academy by offering annual scholarships that encourage them to pursue STEAM-focused studies and explore careers in the energy industry.
