

TEXAS FAST FACTS

HEADQUARTERED IN TEXAS

Oxy has had a presence in Texas since 1963 and is a major employer and contributor to the Texas economy and its vibrant communities. Texas is home to the majority of our employees and our largest asset base of plants and fields.

PERMIAN BASIN LEADERSHIP

Oxy is a leading oil producer in the Permian Basin, which is located in West Texas and Southeast New Mexico, and is one of the largest and most active oil basins in the United States, accounting for more than 49% of total U.S. oil production in 2025. In 2025, Oxy produced approximately 10% of the total oil in the basin with production of 786 thousand barrels of oil equivalent per day.

CO₂ EOR LEADER

Carbon dioxide is a vital resource that we need to advance enhanced oil recovery (EOR) operations, which can unlock previously inaccessible hydrocarbons and extend asset life for decades. CO₂ EOR represents over 2 billion barrels of oil equivalent of potential in unconventional EOR, plus another 2 billion barrels of oil equivalent in conventional EOR. With active CO₂ floods and more than 50 years of experience, Oxy is the industry leader in advancing technologies to produce more oil from existing reservoirs.

CARBON STORAGE

Oxy is committed to transparency on carbon storage in our EOR operations. We received the first two Monitoring, Reporting and Verification (MRV) plans approved by the U.S. Environmental Protection Agency for our CO₂ EOR operations in Denver City, Texas, and Hobbs, New Mexico. We also have two MRV plans for our Gaines County, Texas, operations.

Largest Permian Basin Position

Oxy's combined Permian Basin portfolio of unconventional and conventional acreage differentiates us from our competitors. We have 1.4 million net acres, including premier Delaware and Midland Basin positions for our unconventional operations. Our Permian conventional position includes 1.4 million net acres, which provides significant scale and low-decline production. The key elements of our onshore strategy are to leverage our subsurface technical skills and unconventional shale development and CO₂ EOR expertise.

Permian Takeaway

Oxy's midstream and marketing segment supports our upstream operations in the Permian Basin, allowing us to operate an integrated business from point of production to point of sale.

Strong Safety Performance

Safety is an integral part of Oxy's company culture and we take pride in our track record. In 2025, Oxy achieved its best employee safety performance ever for its total recordable injury rate.

Training Excellence

Our Midland Technical Training Center provides employees and contractors with a real-world training environment, driving operational excellence, collaboration and safe work practices.

Low-Carbon Leadership

With decades of experience in large-scale CO₂ transportation, use and storage for EOR, we are applying our carbon management expertise to advance low-carbon initiatives that we believe will sustainably enhance our business. Oxy is focused on decreasing our total carbon footprint and helping others achieve the same goal.

This brochure contains forward-looking statements based on Oxy's current expectations, beliefs, plans and forecasts. All statements other than statements of historical fact are forward-looking statements. These statements are not guarantees of future performance as they involve assumptions that may prove to be incorrect and involve risks and uncertainties. Factors that may affect Oxy's business can be found in Oxy's filings with the U.S. Securities and Exchange Commission (SEC), which may be accessed at the SEC's website, www.sec.gov.

September 2026

Direct Air Capture Deployment

We are progressing STRATOS, 1PointFive's first DAC facility located in Ector County, Texas, near Odessa. STRATOS is designed to remove up to 500,000 metric tons of atmospheric CO₂ annually. We received our Class VI permits, the first issued to sequester CO₂ from a DAC facility, so we can advance technology that strengthens U.S. energy security and furthers economic growth in Texas.

Strong Position and Portfolio

Oxy's ~16.5 billion barrels of oil equivalent global resource position is built on a balanced portfolio that combines leading unconventional assets with world-class EOR and advanced recovery capabilities complemented by resilient Gulf of America and international operations. Together, with integrated technologies in CO₂, power and water, Oxy is positioned for delivering differentiated long-term value.

Environmental Stewardship

Oxy is an inaugural partner in the Pecos Watershed Conservation Initiative, a proactive, landscape-based approach to conservation of Permian Basin species and habitats. We also participate in several additional conservation agreements for endangered species across Texas.

Water Stewardship

We aim to conserve and protect local water resources in the regions where we operate by optimizing the use of non-potable water supplies, including produced water from oil and gas operations, recycling produced and process water and minimizing freshwater use whenever feasible. More than 95% of water consumed for our oil and gas operations comes from non-freshwater sources.

Reducing GHG Emissions

Oxy's climate-related strategy focuses on reducing greenhouse gas (GHG) emissions in our operations, while developing innovative technologies that enable differentiated oil and gas, power and products with lower-carbon intensity.

Oxy was the first U.S. oil and gas company to establish net-zero goals for direct and indirect GHG emissions and to endorse the World Bank's Zero Routine Flaring (ZRF) by 2030 Initiative. Since 2023, Oxy has sustained ZRF across our U.S. oil and gas operations and we expect to achieve ZRF across our international operated assets well ahead of the World Bank's 2030 target.

Technology and Data Analytics

Industry-leading engineering and the applied use of technology and data analytics are improving efficiency, reducing costs and driving performance, positioning Oxy for long-term success. Our proprietary Oxy Drilling Dynamics technology is helping drive down costs by reducing drilling days, preventing tool failures and improving precision landing.

Artificial Intelligence

Artificial Intelligence (AI) is embedded across Oxy, enhancing and supporting drilling, production, subsurface evaluation and key corporate functions. By applying AI to both near-term operational optimization and longer-term technical challenges, we're improving safety, efficiency and performance while advancing how resources are developed over time.

In the Community

We value our reputation and conduct our business in a manner that safeguards our employees and contractors, benefits neighboring communities, strengthens regional economies and provides energy that is essential to society, while minimizing our environmental footprint. In Texas, we proudly collaborate with organizations such as the Barbara Bush Houston Literacy Foundation, Boys & Girls Club Permian Basin, Midland Rockhounds, Sibley Nature Center, Ellen Noel Art Museum, Petroleum Museum of the Permian Basin, South Plains Food Bank, West Texas Food Bank, Wish for Wheels and more to support and uplift our communities.
