

U.S. OFFSHORE FAST FACTS

A MAJOR PRODUCER IN THE GULF OF AMERICA

Oxy is the fourth-largest oil and gas producer in the deepwater Gulf of America, operating eight strategically located deepwater floating platforms and producing from 14 active fields. In 2025, Oxy's Gulf of America production was 132 thousand barrels of oil equivalent per day from 96 gross wells, representing nearly 10% of the total production from the Gulf of America. This basin accounts for approximately 15% of total U.S. output.

SAFETY AND ENVIRONMENTAL STEWARDSHIP

Safety is an integral part of Oxy's company culture and we take pride in our track record. In 2025, Oxy achieved its best employee safety performance ever for its total recordable injury rate. Our approach to health and safety is conducting business in a manner that protects people, the environment and our assets. Our Gulf of America team holds regular drills with the U.S. Coast Guard, Bureau of Safety and Environmental Enforcement and Bureau of Ocean Energy Management to help ensure our people and platforms are prepared.

INDUSTRY-LEADING EFFICIENCY

Major equipment uptime exceeded 99% in 2025 — a result of disciplined production management and targeted artificial lift programs that have consistently offset reservoir decline across the portfolio.

LARGE LEASEHOLDER

Oxy is one of the largest leaseholders in the Gulf of America and holds a working interest in approximately 230 blocks, covering approximately 0.8 million net acres. This positions Oxy for long-term development opportunities.

COMPETITIVE ADVANTAGE

Oxy's established subsea infrastructure network enables new discoveries to be brought on production via tiebacks — faster and at significantly lower cost than greenfield developments.

Long-Term Planning

Technical teams are advancing secondary recovery through waterflood programs and extended-reach horizontal drilling. These initiatives target substantial low-cost reserves from existing producing reservoirs — significantly extending field life and strengthening the portfolio.

Strong Position and Portfolio

Oxy's ~16.5 billion barrels of oil equivalent global resource position is built on a balanced portfolio that combines leading unconventional assets with world-class enhanced oil recovery (EOR) and advanced recovery capabilities complemented by resilient Gulf of America and international operations. Together, with integrated technologies in CO₂, power and water, Oxy is positioned to deliver differentiated long-term value.

Artificial Intelligence

Artificial Intelligence (AI) is embedded across Oxy, enhancing and supporting drilling, production, subsurface evaluation and key corporate functions. By applying AI to both near-term operational optimization and longer-term technical challenges, we're improving safety, efficiency and performance while advancing how resources are developed over time.

Committed Workforce

Oxy's Gulf of America business is supported by a dedicated team of employees and contractors, primarily located in Texas and Louisiana. An experienced, safety-first workforce is the foundation behind Oxy's operational performance.

Partner in the Community

We collaborate with local and regional organizations to enhance the environmental and economic health of the Gulf of America. For example, Oxy funds research to help scientists better understand wildlife habitats and prioritize locations for conservation along the Gulf Coast.

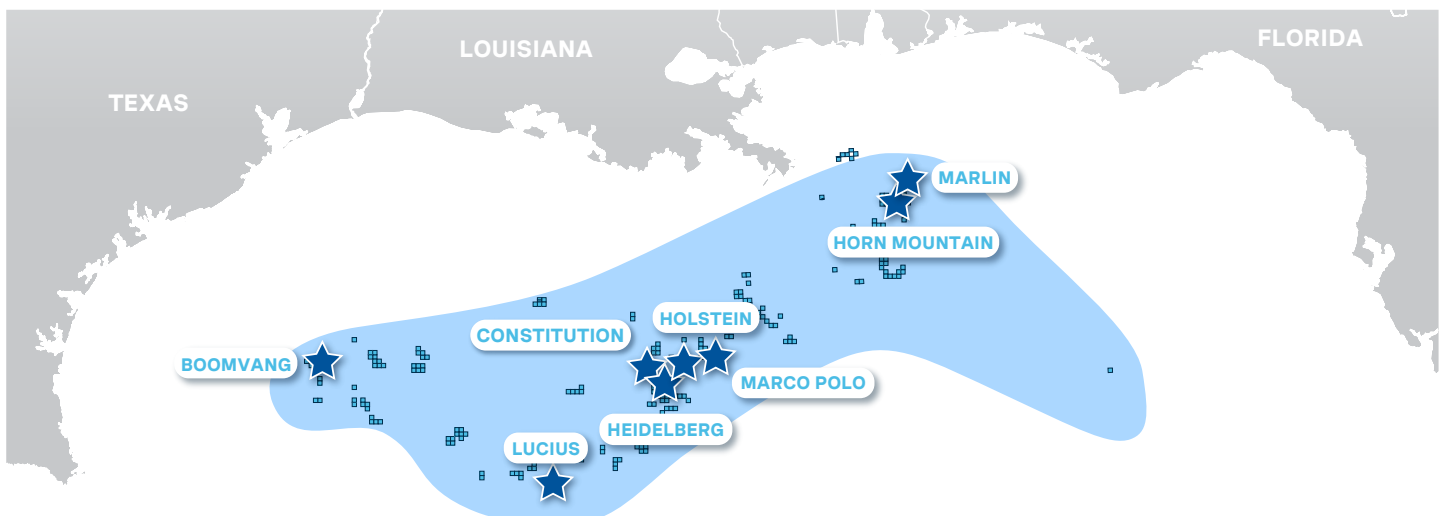

Protecting Natural Resources

Oxy employs technology in its operations and maintains industry partnerships to protect natural resources. The company participates in several industry response and containment organizations, including the Marine Well Containment Company, Clean Gulf Associates, Marine Spill Response Corporation and the Marine Preservation Association.

Sustainable Operations

With zero routine flaring and zero cold venting, Oxy's Gulf of America assets rank among the lowest carbon-intensity deepwater operations in the U.S. offshore industry.
